

# Case of New Influenza Strain (Influenza A (H1N1)) Identified within Toyohashi

I have a request to the people of Toyohashi.

Today, a person infected by the new strain of influenza was identified within Toyohashi.

To the person who came down with the infection, I ask that you stay calm and focus on treatment, and I wish you a speedy recovery.

According to the conditions of occurrences of this new strain of influenza in Japan thus far, we know that receiving early and proper treatment leads to a smooth recovery.

Therefore, I ask that everyone in Toyohashi take personal precautions against infection such as washing hands, gargling, and carefully obeying coughing etiquette. I also ask that everyone act in a calm manner based on accurate information provided from such sources as the city, the prefecture, and the national government.

If you have flu-like symptoms such as fever or difficulty breathing, then **please call the call center (telephone: 48-1911) for advice before you go to a hospital, clinic, or other medical facility.**
